Grade	4.00 out of 4.00 (100%)

Question 1

Correct

Mark 1.00 out of 1.00

Flag question

Use o módulo Python `math` para inicializar as variáveis `x1`, `x2`, `x3` com os fatoriais de 30, 40 e 50, respetivamente.

For example:

Test	Result
<code>print(x1)</code>	265252859812191058636308480000000

Answer: (penalty regime: 0 %)

Ace editor not ready. Perhaps reload page?

Falling back to raw text area.

```
from math import factorial
a=30
b=40
c=50
x1=factorial(a)
x2=factorial(b)
x3=factorial(c)
```

	Test	Expected	Got
✓	<code>print(x1)</code>	265252859812191058636308480000000	265252859812191058636308480000000
✓	<code>print(x2)</code>	8159152832478977343456112695961158942720000000000	8159152832478977343456112695961158942720000000000
✓	<code>print(x3)</code>	30414093201713378043612608166064768844377641568960512000000000000	30414093201713378043612608166064768844377641568960512000000000000

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 2

Correct

Mark 1.00 out of 1.00

Flag question

Releia o exercício de conversão de graus Fahrenheit para Celsius. Aqui pretendemos fazer o inverso. Lendo o input do utilizador que nos dá uma temperatura em graus Celsius, queremos inicializar a variável `grausFahrenheit` com o valor da conversão para graus Fahrenheit.

Repare que a função `input` devolve o valor introduzido pelo utilizador numa *string*. Por esse motivo é necessária a sua conversão para um valor apropriado. No nosso caso queremos converter o valor recebido para um *float*.

For example:

Test	Input	Result
<code>print(grausFahrenheit)</code>	0	32.0

Answer: (penalty regime: 0 %)

Reset answer

Ace editor not ready. Perhaps reload page?

Falling back to raw text area.

```
grausCelsius = float(input()) # não alterar esta linha
# C=5/9*(F-32)
#F=C*(9/5) + 32
grausFahrenheit= (grausCelsius * (9/5))+32
```

	Test	Input	Expected	Got	
✓	<code>print(grausFahrenheit)</code>	0	32.0	32.0	✓
✓	<code>print(grausFahrenheit)</code>	100	212.0	212.0	✓
✓	<code>print(grausFahrenheit)</code>	51	123.8	123.8	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 3

Correct

Mark 1.00 out of 1.00

Flag question

Dados os lados `a`,`b`,`c` de um triângulo, calcular e imprimir o co-seno do ângulo `A`, de acordo com a figura.

Imprima a sua resposta com três casas decimais. Use a formatação `{ :5.3f }` para fazer print do resultado.

dica: ler a página da Wikipedia sobre a [Lei dos cossenos](#)

For example:

Input	Result
3 4 5	0.800
3.1 5.9 7.33	0.913

Answer: (penalty regime: 0 %)

Reset answer

Ace editor not ready. Perhaps reload page?

Falling back to raw text area.

```
import math
a = float(input()) # terei de fazer alguma conversão de valores?
b = float(input())
c = float(input())
cos=((b**2)+(c**2)-(a**2))/(2*b*c)
print("{:1.3f}".format(cos))
```

	Input	Expected	Got	
✓	3 4 5	0.800	0.800	✓
✓	6 8 10	0.800	0.800	✓
✓	3.1 5.9 7.33	0.913	0.913	✓
✓	10 10 10	0.500	0.500	✓
✓	10 10 19	0.950	0.950	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 4

Correct

Mark 1.00 out of 1.00

Flag question

Dada a altura e o raio da base de um cilindro e de um cone, calcule e imprima os respetivos volumes, bem como o ratio entre os seus volumes. Para tal defina as variáveis `volumeCilindro`, `volumeCone`, e `ratio`.

Lesson 15-16 ~ Optional – GeoGebra

Imprima os resultados com quatro casas decimais.

For example:

Input	Result
10 10	3141.5927 1047.1976 3.0000

Answer: (penalty regime: 0 %)

Reset answer

Ace editor not ready. Perhaps reload page?

Falling back to raw text area.

```
import math
h = float(input())
r = float(input())
volumeCilindro=round(((math.pi) * (r*r) * h),4)
volumeCone=round((((math.pi)*(r*r)*h))/3,4)
ratio=round(volumeCilindro / volumeCone ,4)
print(volumeCilindro)
print(volumeCone)
print("{:1.4f}".format(ratio))
```

	Input	Expected	Got	
✓	10 10	3141.5927 1047.1976 3.0000	3141.5927 1047.1976 3.0000	✓
✓	50 1	157.0796 52.3599 3.0000	157.0796 52.3599 3.0000	✓
✓	1 50	7853.9816 2617.9939 3.0000	7853.9816 2617.9939 3.0000	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
